
Virtual Reality

NBAY 6120

April 4, 2016

Donald P. Greenberg

Lecture 9

Virtual Reality

- A term used to describe a digitally-generated environment which can simulate the perception of PRESENCE.
- Note that within the context of this course, I refer to VR as containing 3D data as contrasted to just creating a digital copy of information obtained from a film or digital camera.

Virtual Reality

- A person immersed within this virtual world can manipulate objects, interact with the environment, and explore the virtual world in the same perceptual way as one interacts with the physical world.

Why is VR different than other modes of watching images and video?

Human in the Loop

- Abstract Interpretation
- Viewing a Picture on Television
- Cinema Viewing
- Presence

Current and Recent Business Investments

Facebook Buys Oculus Rift

Why did Facebook invest \$2 billion in Oculus Rift?

Microsoft's Minecraft

Microsoft's Hololens

Microsoft's Hololens

3/30/16

Why did Microsoft buy Minecraft?

Why is Microsoft building its Hololens?

Google

Why is Google (and Andressen / Horwitz) investing \$500+ million in Magic Leap?

Virtual Reality

- What is necessary to make virtual reality a reality?

Virtual Reality

- Virtual Reality is not new
- The amount of financing which has been made available
- Costs have been sufficiently lowered to bring to the masses

Not Yet Available

HTC and Valve's SteamVR Vive

2016

Available Tomorrow

HTC and Valve's Tower and Hands

Minecraft and Netflix for VR

9/24/15

John Carmack announces deal for bringing both Minecraft (MSFT) and Netflix to both Gear VR and Oculus VR.

Minecraft was bought by MSFT for \$2.5B, and Netflix is responsible for 37% of internet traffic.

Betting on New Worlds

Venture funding for virtual reality and augmented reality (before and after Facebook's purchase of Oculus)

Requirements for “PRESENCE”

Need to be able to see (understand) correct DEPTH information

Need to have significant RESOLUTION to merge virtual and real imagery

Need to render images that are physically accurate and perceptually indistinguishable from real world scenes

and

all of this must be done fast enough to imply motion

Depth Perception from 2-D Images

Accommodation

Note change in lens shape

Accommodation

This is the process by which the vertebrate eye changes optical power to maintain a clear image or focus on an object as its distance varies.

Accommodation

The reflex can be controlled but cannot be ‘felt’
Accommodation amplitude declines with age

Stereoscopic Vision: Behind The Screen (Concave)

Stereoscopic Vision: In Front Of The Screen (Convex)

Stereoscopic Vision: At The Screen

Vergence

The simultaneous movement of the pupils of the eyes toward or away from one another during focusing.

This measure of the convergence or divergence of a pair of light rays is defined as vergence.

Diagram of Vergence

Vergence Accommodation Conflict

Computer and projection displays present images on a single surface but have a focal distance (blur on the retina) which may be in front of or behind the screen

The inability to fuse the binocular stimuli causes discomfort and fatigue to the viewer

Viewers can be trained, and the discomfort can diminish with practice
