Donald P. Greenberg
Lecture 7

Virtual Reality

- A term used to describe a digitally-generated environment which can simulate the perception of PRESENCE.

Virtual Reality

- A term used to describe a digitally-generated environment which can simulate the perception of PRESENCE.
- Note that within the context of this course, I refer to VR as containing 3D data as contrasted to just creating a digital copy of information obtained from a film or digital camera.

Requirements for “PRESENCE”

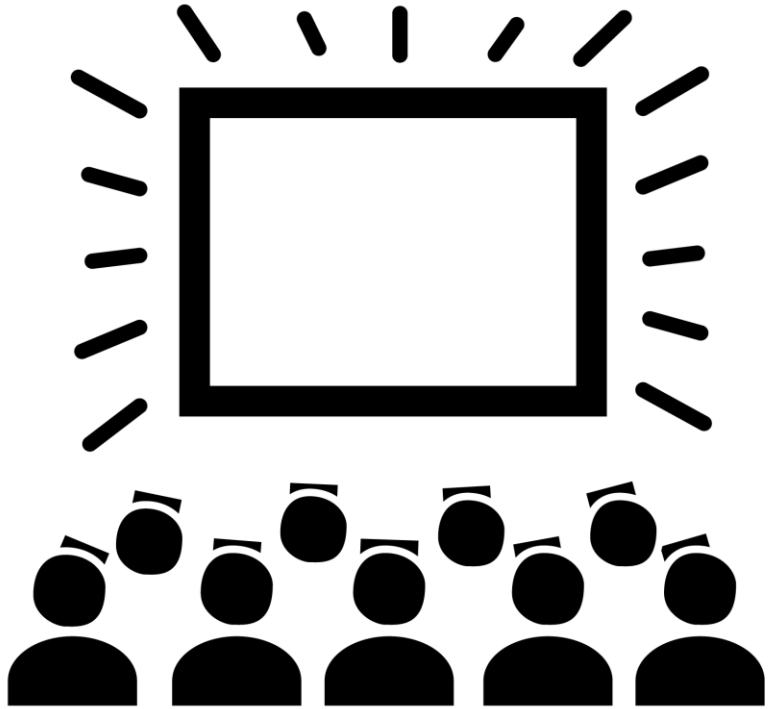
- Understanding the Human Visual System
- Improving the Device Characteristics and System Performance
- Social Acceptance

Virtual Reality

- A person immersed within this virtual world can manipulate objects, interact with the environment, and explore the virtual world in the same perceptual way as one interacts with the physical world.

Human in the Loop

- Abstract Interpretation
- Viewing a Picture on Television
- Cinema Viewing
- Presence

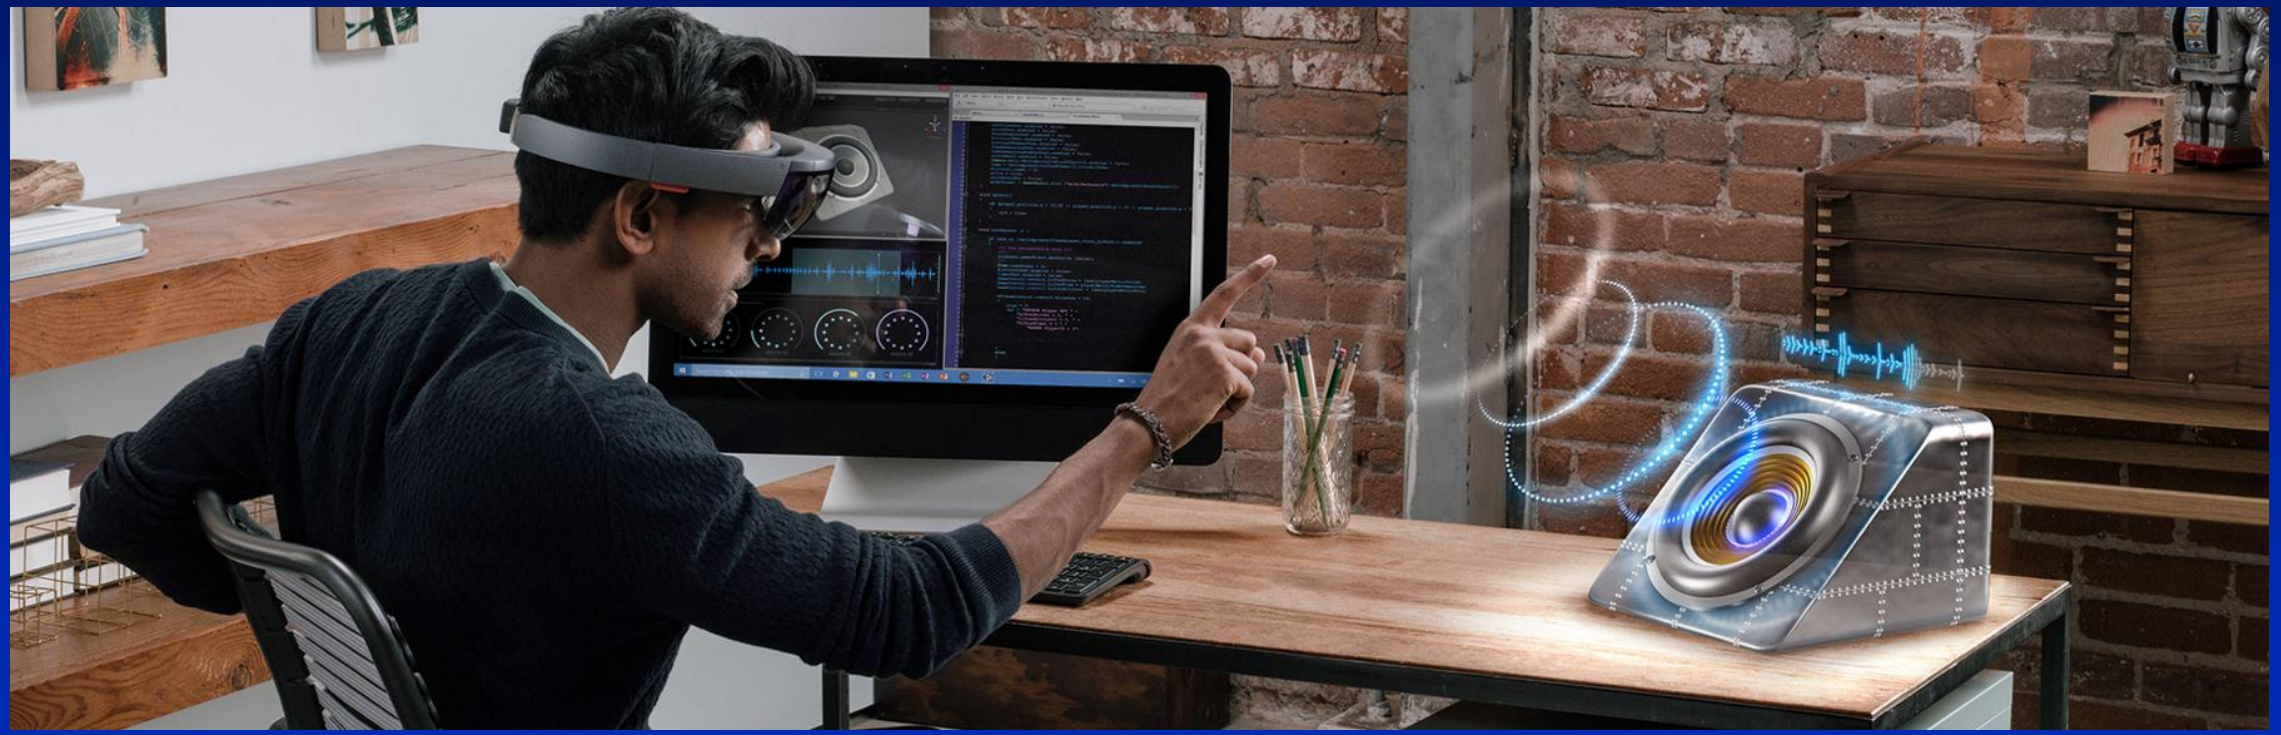


Current and Recent Business Investments

Facebook Buys Oculus Rift

Microsoft’s Minecraft

Microsoft's Hololens 3/30/16



Magic Leap 2015

Virtual Reality

- What is necessary to make virtual reality a reality?

Ivan Sutherland's HMD 1968

Requirements for “PRESENCE”

Need to be able to see (understand) correct DEPTH information

Need to have significant RESOLUTION to merge virtual and real imagery

Need to render images that are physically accurate and perceptually indistinguishable from real world scenes

Requirements for “PRESENCE”

Need to be able to see (understand) correct DEPTH information

Need to have significant RESOLUTION to merge virtual and real imagery

Need to render images that are PHYSICALLY ACCURATE and PERCEPTUALLY INDISTINGUISHABLE from real world scenes

and

all of this must be done fast enough to imply motion

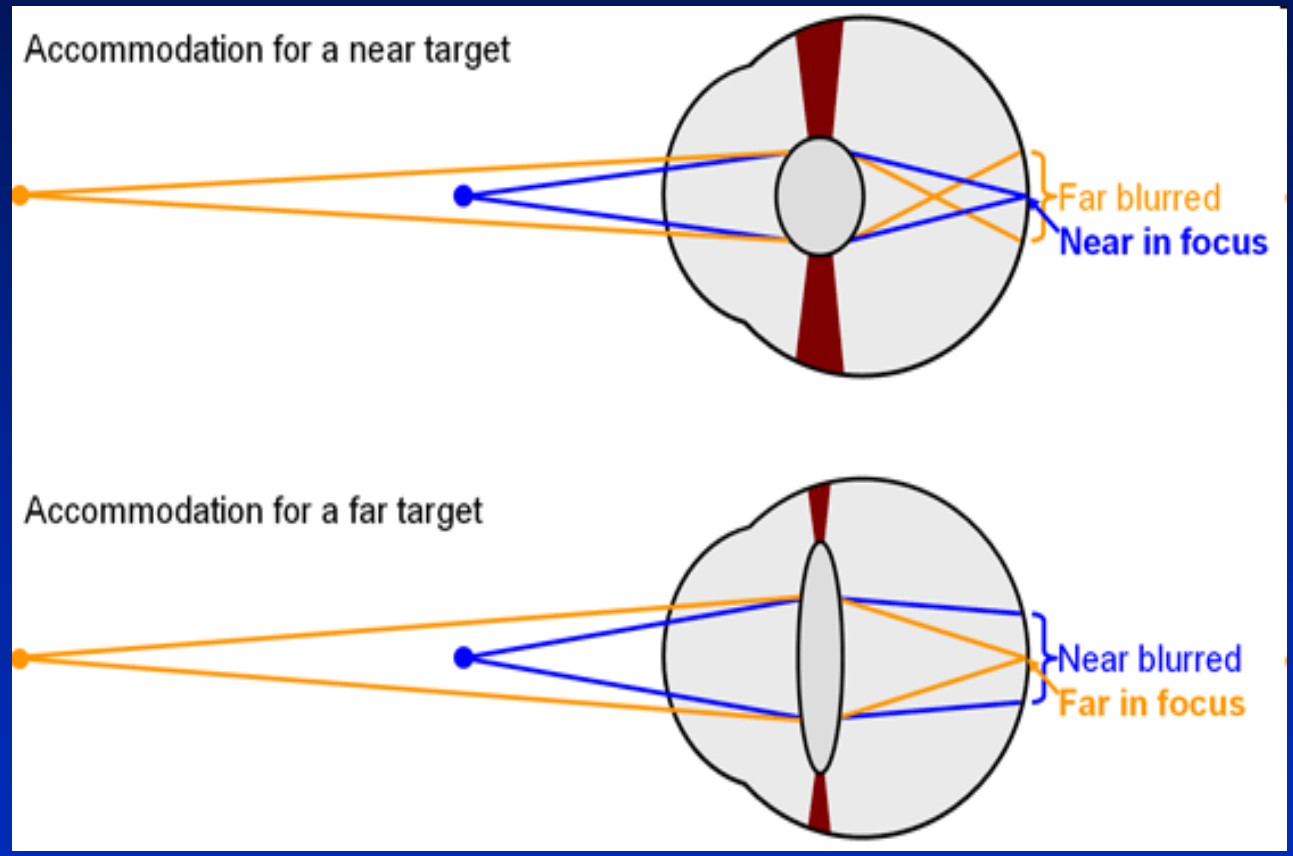
Accommodation

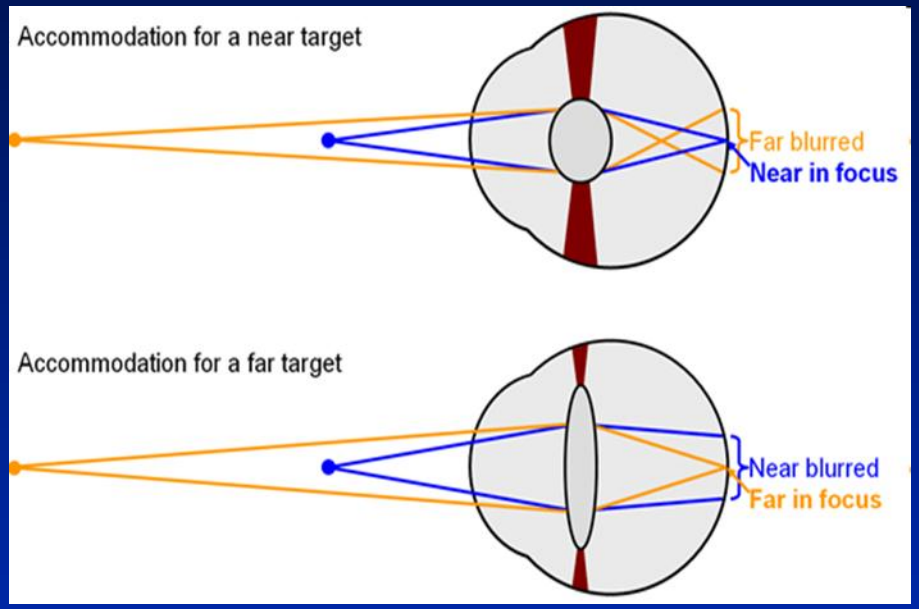


Note change in lens shape

Accommodation

This is the process by which the vertebrate eye changes optical power to maintain a clear image or focus on an object as its distance varies.

Accommodation



The reflex can be controlled but cannot be ‘felt’

Accommodation amplitude declines with age

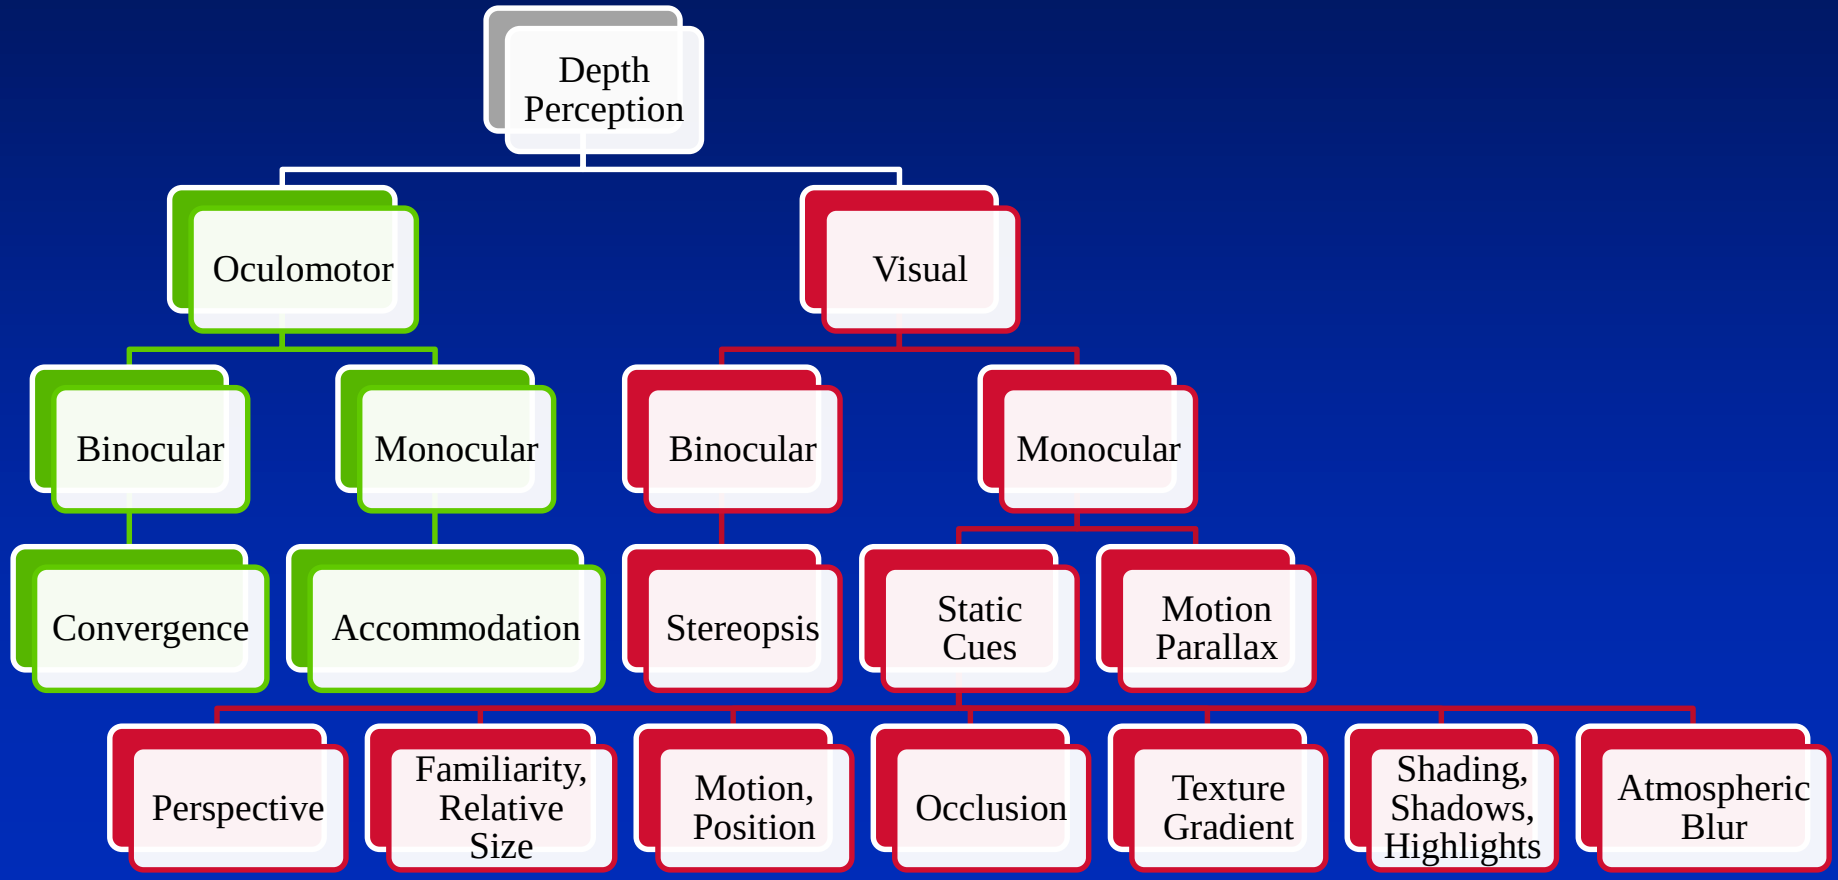
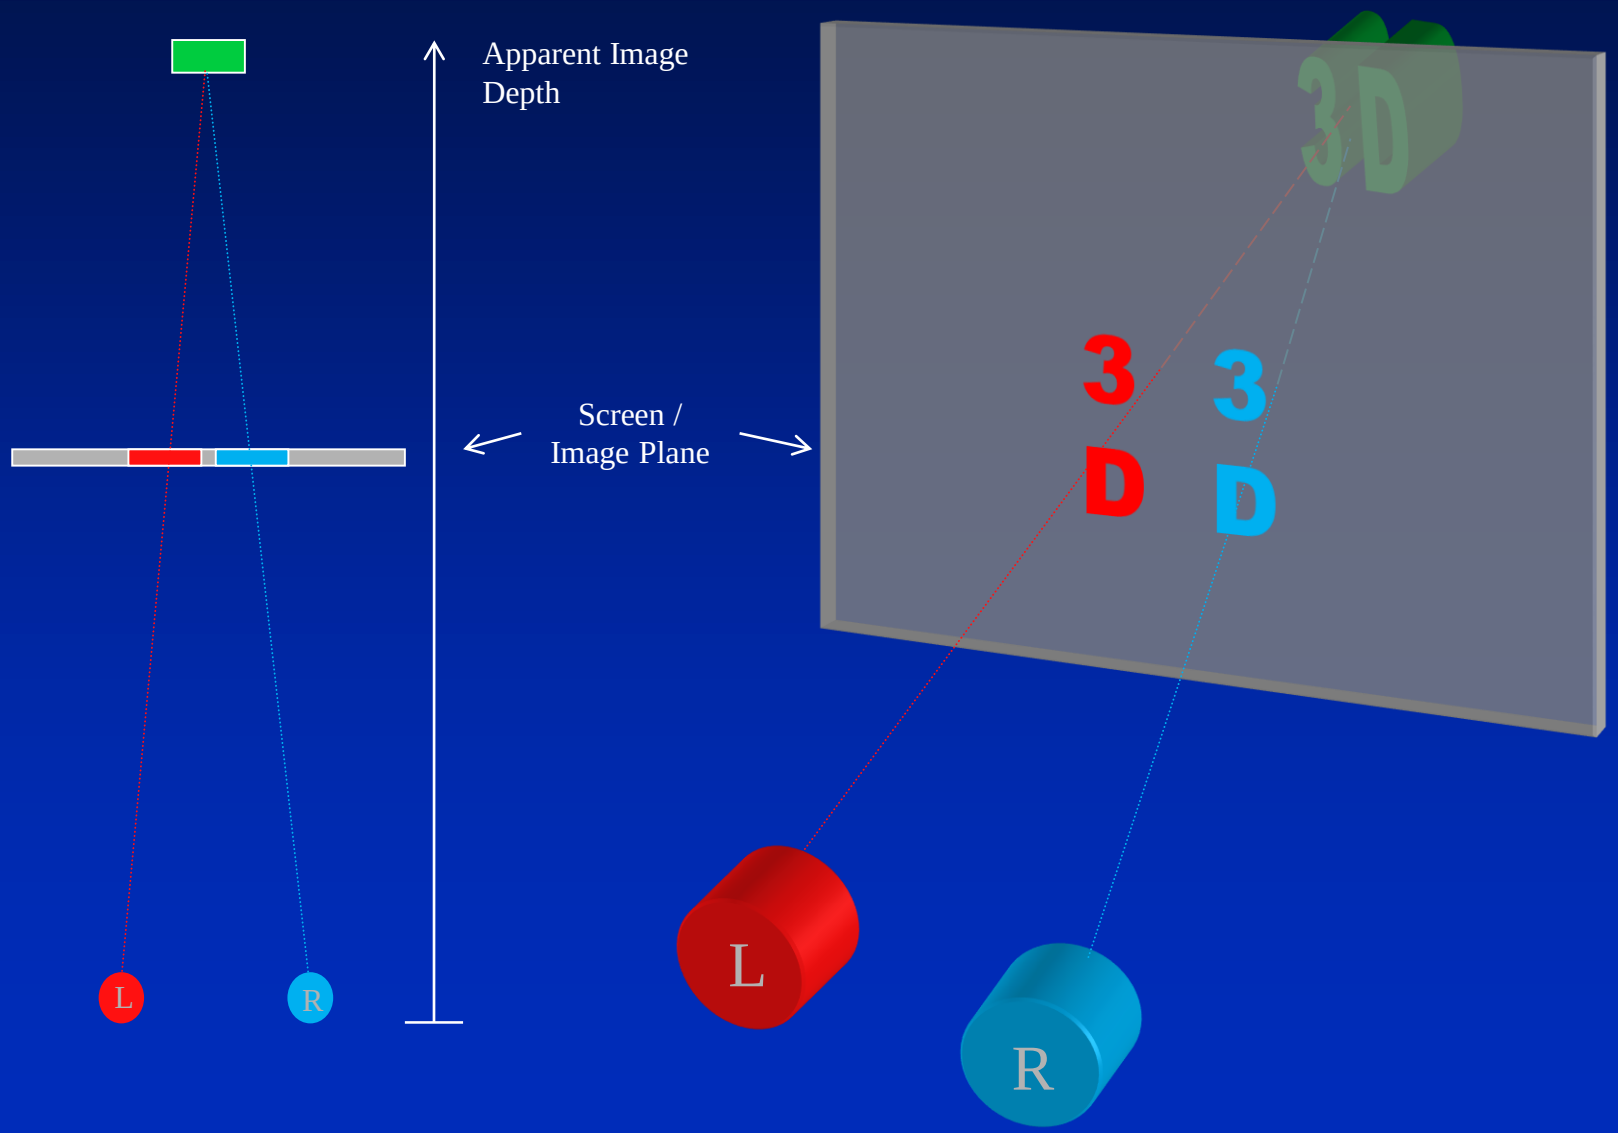
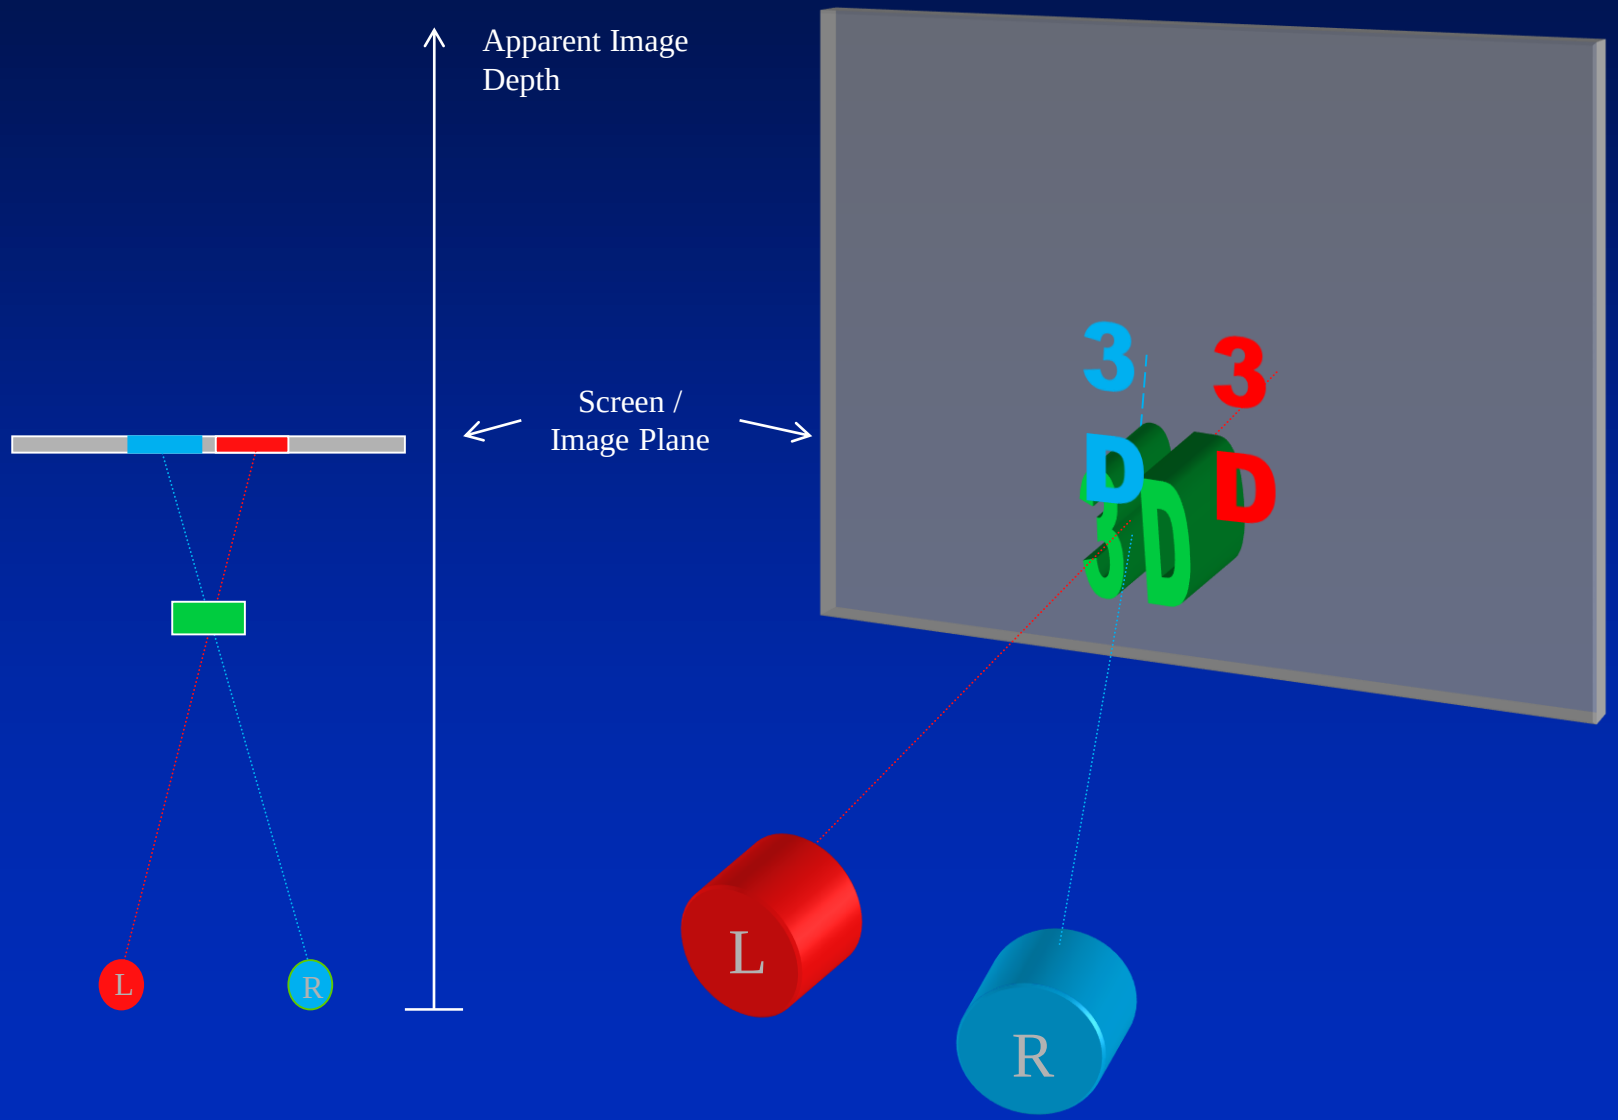
Human Depth Perception



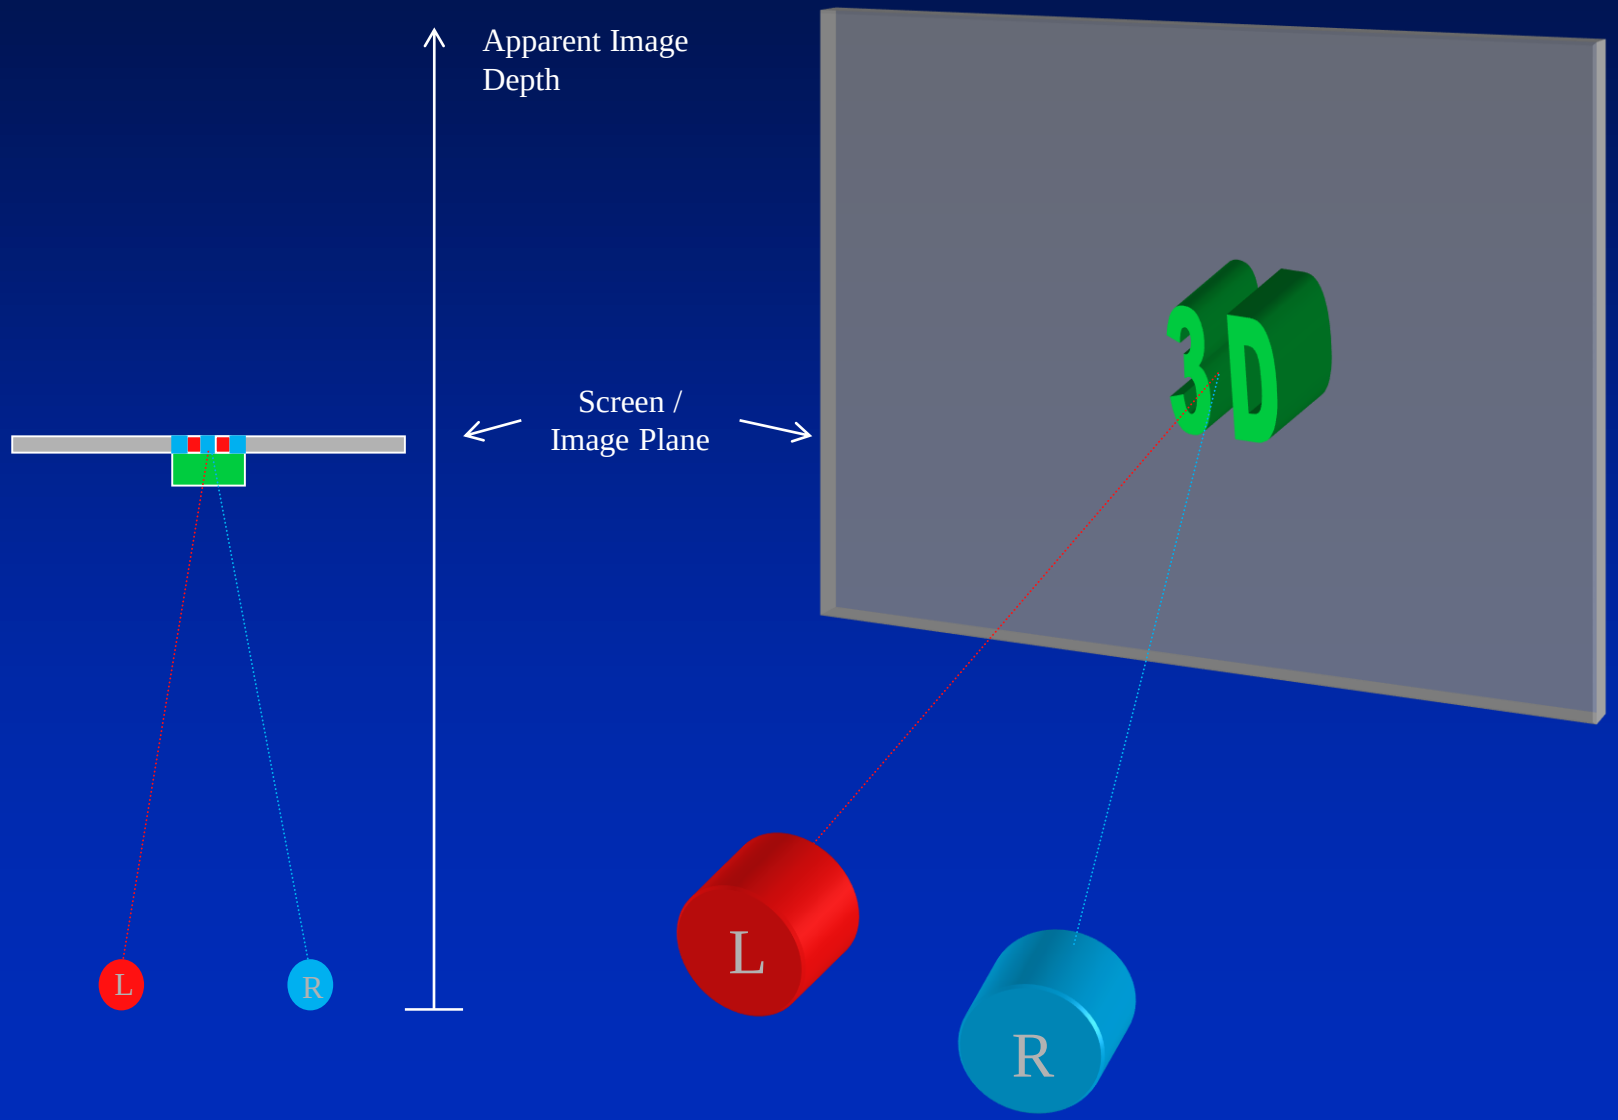
Stereoscopic Vision: Behind The Screen (Concave)



Stereoscopic Vision: In Front Of The Screen (Convex)



Stereoscopic Vision: At The Screen

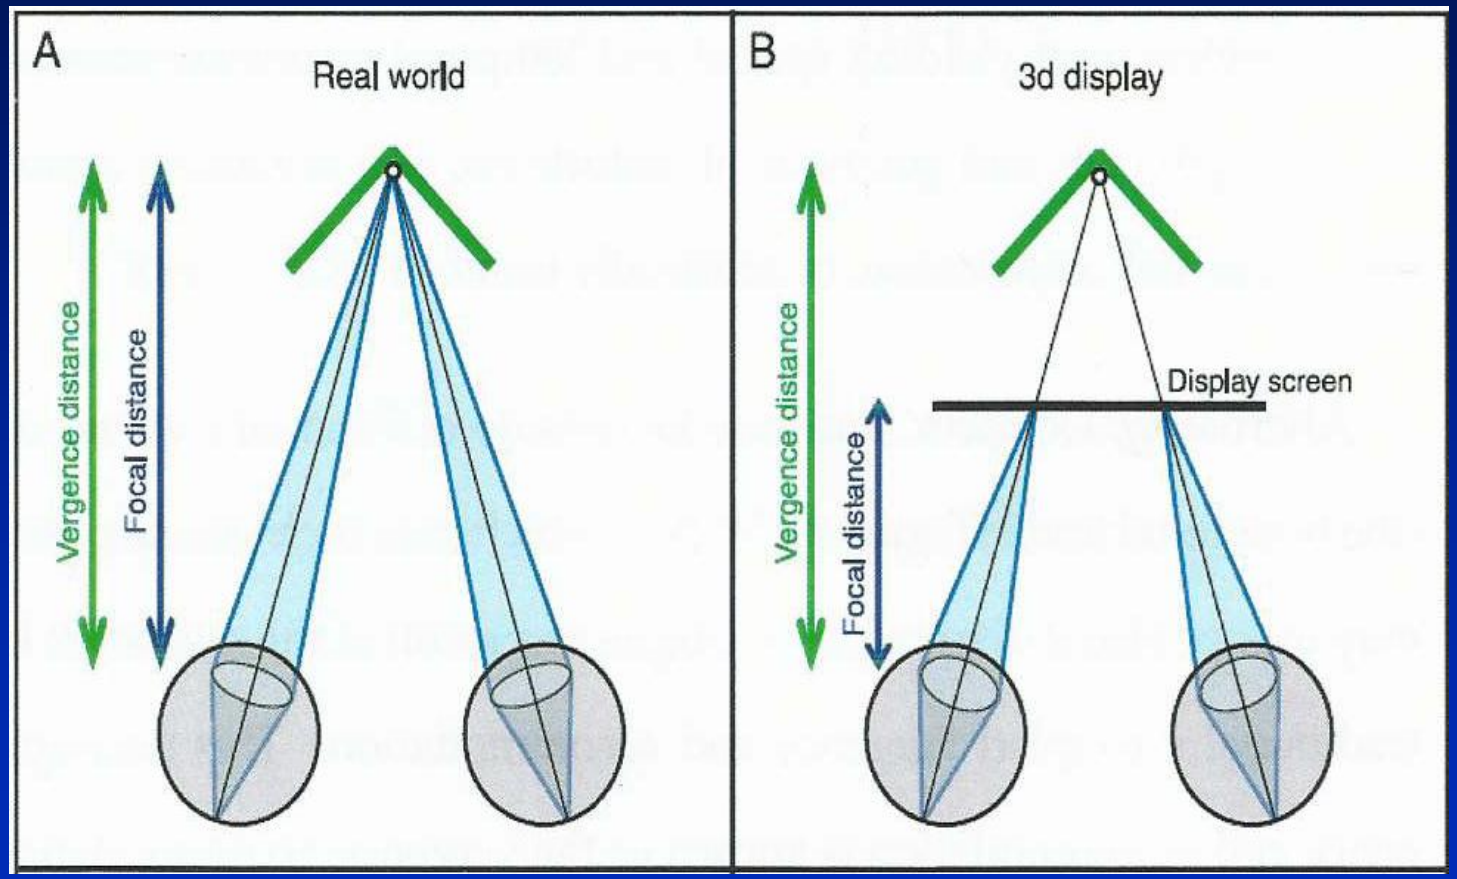


Vergence

The simultaneous movement of the pupils of the eyes toward or away from one another during focusing.

This measure of the convergence or divergence of a pair of light rays is defined as vergence.

Diagram of Vergence



Vergence Accommodation Conflict

Computer and projection displays present images on a single surface but have a focal distance (blur on the retina) which may be in front of or behind the screen

The inability to fuse the binocular stimuli causes discomfort and fatigue to the viewer

Viewers can be trained, and the discomfort can diminish with practice

David M. Hoffman, Ahna R. Girschick, Kurt Akeley, Martin S. Banks. “Vergence-accommodation conflicts hinder visual performance and cause visual fatigue, Journal of Vision, vol. 8, no. 3, article 33, March 28, 2008.

End

What is a Light Field?

- Radiance is defined as the light energy coming from a specific direction.
- A light field is defined as the radiance at a position (x, y), and a direction (θ, φ).
- Thus, the light field is a 4-dimensional space.
